## Digital Readouts For Metrology Applications

May 2012

For many metrology applications, ranging from simple measuring stations to complex inspection systems with multiple measuring points, HEIDENHAIN supports you with the appropriate digital readouts or PC solutions.

The functionality always orients itself to the specific application. Whether it is an SPC inspection station, a tool presetter, a profile projector, a measuring microscope, or a manual coordinate measuring machine, the **digital readouts and PC solutions for metrology applications** from HEIDENHAIN are the right choice for measurement tasks. There is even a CNC option for the automation of measurement tasks.

**Digital readouts from HEIDENHAIN for manual machine tools** optimally support the operator with well proven cycles for milling, drilling and turning. You can find these digital readouts on the Internet at [www.heidenhain.de](http://www.heidenhain.de) or in the *Digital Readouts and Linear Encoders for Manually Operated Machine Tools* product brochure.

# ND 100 QUADRA-CHEK

## – the digital readouts for 2-D geometries

The ND 100 digital readouts can support two to three axes, and function as measuring computers for 2-D geometries. They are suited as entry-level readouts for optical comparators, measuring microscopes and 2-D measuring machines.

### Description

The ND 100 digital readouts have a monochrome flat-panel screen for displayed values, dialogs and inputs, graphics functions and soft keys. With its sturdy housing and splash-proof membrane keyboard, the ND 100 is built for the workshop.

### Functions

The appropriate combination of defined function keys and context-dependent soft keys always provides you with a clear overview. The innovative operator guidance provides self-explanatory information about the various functions. It already supports you while setting up the coordinate system (aligning the part and specifying the datum).

Predefined features (point, line, circle) are available for measurement. You can also apply tolerance values to features and relationships. Only those tolerances actually possible are offered for the selected feature.

The ND 100 readouts measure points on plane (2-D) contours manually via crosshairs.

### Data interfaces

A USB interface enables the digital readout to indicate measured values and import or export parameters and tables.

### Graphic display

In addition to the position values, the ND 100 also displays the features graphically. Along with the individual measuring points, the geometrical and arithmetical deviations are also shown. Furthermore, for circles the maximum inscribed circles and minimum circumscribed circles are shown.

### Tolerances

You can also apply tolerance values to any feature. Only those tolerances actually possible are offered for the selected feature. This means that a point can only be assigned a tolerance check for its position, whereas a circle can be assigned position, shape and size tolerances.

### Defining features

You can use the QUADRA-CHEK digital readouts to define features yourself. For example, this could be a circle whose position and dimensions are exactly defined, or an alignment line that is at a specified angle to a measurable line.

# ND 1100 QUADRA-CHEK

– the digital readouts for simple positioning tasks

The ND 1100 QUADRA-CHEK digital readouts can support up to four axes. They are mainly suited to positioning tasks on positioning equipment and measuring fixtures, as well as for retrofitting on measuring machines for data acquisition and relaying to a PC.

## Description

The ND 1100 QUADRA-CHEK digital readouts have a monochrome flat-panel screen for displayed values, dialogs, inputs and soft keys. The robust, die-cast aluminum enclosure meets the demands of metrology and production control.

## Functions

The logical placement of the function keys and soft keys permits innovative operator guidance, which supports you when using the diverse functions.

Along with the usual functions of a digital readout, such as zeroing and setting of reference values, the ND 1100 QUADRA-CHEK units have numerous more useful functions:

- Each axis can be configured for linear or angular display
- Minimum/maximum value storage
- Simple switching between counting directions
- Continuous data output via internal clock, or upon probing

## Data interfaces

You use the data interfaces to output measured points as well as to save settings and compensation values. The ND 1100 has an RS-232-C/V.24 serial interface for communication with a PC. You can connect printers or memory media directly to the USB port.

## Display format

Depending on the type of encoder connected, you can define linear or angular display individually for each axis.

X	14.5653		
Y	-8.2776		
Z	20°30'50"		
Q	324°55'30"		
Abs	MM	Menu	Preset

## Minimum/maximum value storage

The ND 1100 is capable of minimum/maximum value storage in any selectable axis. The largest and smallest measured values of a measurement series, as well as the difference, are stored, and can be output via the data interface. This function is especially advantageous during concentricity testing.

MinMax				
Max	14.7653			
Min	14.5653			
Spannw.	0.2000			
Both	Max	Min	Neu	Preset

## Touch-probe connection

Touch probes (e. g. from HEIDENHAIN or Renishaw) can be connected to the ND 1100. The digital readout automatically reads the current position value during probing, and also takes the radius of the stylus into account.

## Output format of measured values

Since the universal output formats are used by various manufacturers of measuring machines, the ND 1100 can easily be retrofitted as a data logger to manually operated measuring machines. The measured values are captured by the ND, and then relayed to a connected PC for further processing.

X	12.3553 mm
Y	-8.2006 mm

# ND 1200 QUADRA-CHEK

## – the digital readouts for 2-D geometries

The ND 1200 digital readouts can support up to four axes, and function as measuring computers for 2-D geometries. They are mainly suited to optical comparators, measuring microscopes and 2-D measuring machines.

### Description

The ND 1200 QUADRA-CHEK digital readouts have a monochrome flat-panel screen for displayed values, dialogs and inputs, graphics functions and soft keys. The robust, die-cast aluminum enclosure meets the demands of metrology and production control.

### Functions

The appropriate combination of defined function keys and context-dependent soft keys always provides you with a clear overview. The innovative operator guidance provides self-explanatory information about the various functions. It already supports you while setting up the coordinate system (aligning the part and specifying the datum).

Predefined features (point, line, circle) are available for measurement. The "Measure Magic" function makes measurement especially easy: it selects that feature which best matches the shape implied by the points probed. In addition, you can establish relationships (distances, angles) between features.

You can also apply tolerance values to features and relationships. Only those tolerances actually possible are offered for the selected feature. This means that a point can only be assigned a tolerance check for its position, whereas a circle can be assigned position, shape and size tolerances.

The ND 1200 captures measuring points of plane contours (2-D) either manually via crosshairs or, as an option, automatically via the optical edge detector.

### Data interfaces

You use the data interfaces to output measuring points as well as to read and transmit settings, compensation values and programs. The RS-232-C/V.24 serial interface enables communication with a PC. You can connect printers or memory media to the USB port.

### Graphic display

In addition to the position values, the ND 1200 also displays the features graphically. Along with the individual measuring points, the geometrical and arithmetical deviations are also shown. Furthermore, for circles the maximum inscribed circles and minimum circumscribed circles are shown.

CIRCLE 5		mm	1	+
X	-78.9149			
Y	3.9592			
D	0.3898			
Pts=8				
F	0.0190			
LSBF				
DRO				
Recall	View	Change	Zoom	Tol

### Tolerances

You can also apply tolerance values to any feature. Only those tolerances actually possible are offered for the selected feature. This means that a point can only be assigned a tolerance check for its position, whereas a circle can be assigned position, shape and size tolerances.

CIRCLE 2		mm	1	+
Circle Position and Size Tolerance				
Tol Type: BiDir				
	Actual	Dev		
X	174.9079	0.0079		✓
Y	-20.1577	0.0023		✓
D	58.3624	0.0004		✓
Edit	Nominal	Actual	Dev	Other

### Defining features

You can use the QUADRA-CHEK digital readouts to define features yourself. For example, this could be a circle whose position and dimensions are exactly defined, or an alignment line that is at a specified angle to a measurable line.

ANGLE 12		mm	1	+
X	10.0000			
Y	20.0000			
A1	50°00'00"			
Created				
DRO				
Recall	View			Tol

### Measure Magic

The Measure Magic function recognizes the geometric pattern based on the distribution of the measuring points, and automatically calculates which feature it is, such as a point, line or circle.

If the measuring points are poorly chosen, then it may not be possible to determine the feature unambiguously. Measure Magic then chooses the more common version. You can have the feature displayed graphically, and then select from the possibilities.

CIRCLE 2		mm	1	+

# ND 1300 QUADRA-CHEK

– the digital readouts for convenient 2-D measurement

The ND 1300 QUADRA-CHEK digital readouts can support up to four axes. They function as measuring computers with 2-D measurement of points, suiting them for measuring microscopes, measuring projectors and profile projectors, as well as for video measuring machines if the video edge detection option is installed.

## Description

The digital readouts of the ND 1300 series are characterized by the large, color touchscreen. Their enclosures consist of robust, die-cast aluminum.

## Functions

The innovative operator guidance provides self-explanatory information about the various functions. It already supports you while setting up the coordinate system (aligning the part and specifying the datum).

Predefined features (point, line, circle, slot and rectangle) are available for measurement. The "Measure Magic" function makes measurement especially easy. In addition, you can establish relationships (distances, angles) between features.

You can create or automatically record measuring programs for repeated parts. The digital readout graphically takes you to the next measuring position during program run.

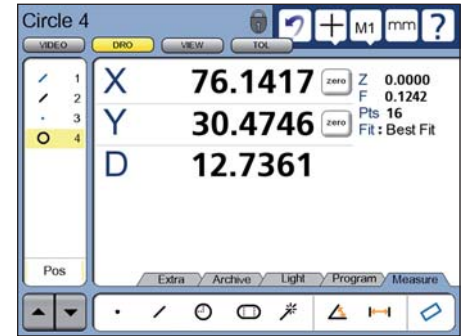

Depending on the option installed, the ND 1300 probes the points of plane (2-D) contours either automatically or manually via crosshairs, optical edge detection, or a video camera. The integrated image processing function of the video option provides a special benefit: the video image is shown on the screen in real time, and can be saved and output via the data interface. The digital readout even assumes complete control of the illumination and the motor zoom.

## Data interfaces

You use the data interfaces to output measuring points as well as to read and transmit settings, compensation values and programs. The RS-232-C/V.24 serial interface enables communication with a PC. You can connect printers or memory media to the USB port.

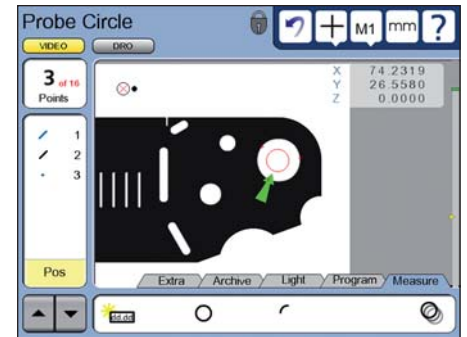

## Clearly structured display

The large, color, flat-panel touchscreen enables simple operation with intuitive operator guidance, since in each mode only those functions actually available are offered for selection. The numeric keypad and the few basic function keys are located in ergonomically favorable positions.

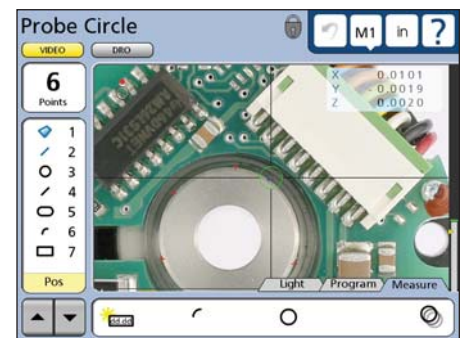

## Point measurement

The ND 1300 readouts are designed for 2-D measurements. You are provided with various tools with which you can manually or automatically measure points. For automatic point measurement you simply roughly approach the position. The actual edge is automatically detected by the active tool (option). This objective point measurement permits a high degree of repeatability. This makes it possible for you to work quickly and reliably, without tiring, while at the same time maintaining a low degree of measurement uncertainty.

## Integrated image processing

The ND 1300 with video option optimally combines in one unit the functions of a position display unit with the capability of displaying the image of the measured object directly on the screen. The separate PC with a frame grabber or monitor with crosshair generator that you would normally need is not necessary. Video cameras with S-Video or composite interfaces can be connected.

## Axis positioning

The CNC option lets the ND 1300 work as a full-fledged control, directly controlling the positioning of the X, Y, Z and Q axes. Servo motors and stepper motors can be connected. The necessary servo amplifiers for two or three axes are available as accessories.

# ND 1400 QUADRA-CHEK

– the digital readout for manual 3-D measuring machines

The ND 1400 QUADRA-CHEK digital readout supports four axes: in addition to the linear axes XYZ it features an auxiliary axis Q solely for angular display. The readout is designed specifically for manual coordinate measuring machines, and can capture two- and three-dimensional features with its measuring computer functionality.

## Description

The ND 1400 digital readout is characterized by the large, color touchscreen. Their enclosures consist of robust, die-cast aluminum.

## Functions

The innovative operator guidance provides self-explanatory information about the various functions. It already supports you while setting up the coordinate system (ascertaining the reference plane, aligning the part and specifying the datum).

Predefined features (point, line, circle, slot, rectangle, plane, cylinder, cone, sphere) are available for measurement. The "Measure Magic" function makes measurement especially easy: it selects that feature which best matches the shape implied by the points probed. In addition, you can establish relationships (distances, angles) between all features.

You can create or automatically record measuring programs for repeated parts. The digital readout graphically takes you to the next measuring position during program run.

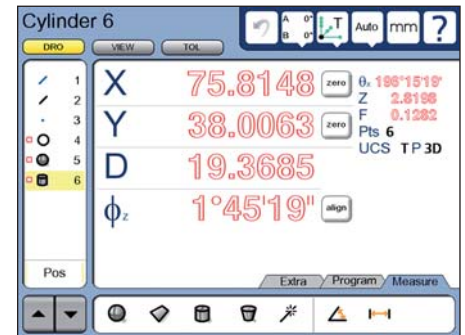

You can also use the ND 1400 to measure 3-D features, such as surfaces, cylinders, cones, etc. The measuring points are probed with a touch probe. If a triggering touch probe is used the values are transferred automatically. With rigid probing elements a key must be pressed. The measured features can be clearly displayed either in three dimensions or in one of the three projection planes.

## Data interfaces

You use the data interfaces to output measuring points as well as to read and transmit settings, compensation values and programs. The RS-232-C/V.24 serial interface enables communication with a PC. You can connect printers or memory media to the USB port.

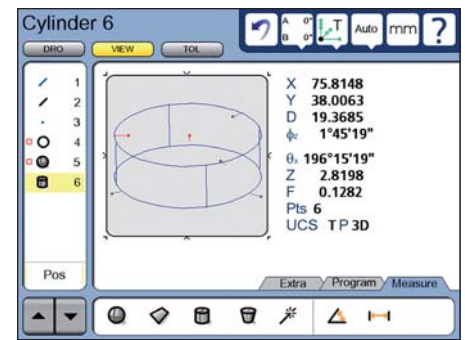

## Clearly structured display

The large, color, flat-panel touchscreen enables simple operation with intuitive operator guidance, since in each mode only those functions actually available are offered for selection. The numeric keypad and the few basic function keys are located in ergonomically favorable positions.

## Measuring 3-D contours

In addition to the flat geometric features, such as points, lines, circles, etc., you can also use the ND 1400 to measure 3-D shapes, e.g. cylinders or cones. The screen displays the feature in three dimensions. Colored highlighting of each measuring point lets you identify form errors and any filtered measured values at a glance. The ND 1400 also permits 3-D position and form tolerances, such as flatness and parallelism.

## Working with the touch probe

The ND 1400 also supports you optimally while working with touch probes. You can instantaneously call commercial probing elements (normal stylus, star stylus), as well as rigid and tiltable probing heads, all of which are managed in a library, via the touchscreen. During probing the ND automatically takes the direction of probing into account, as well as the length and diameter of the stylus. Even complex parts can be rapidly measured with the five available coordinate systems.

## Point measurement

The ND 1400 probes the measuring points via the touch probe of the coordinate measuring machine. A triggering 3-D touch probe is connected directly to the digital readout, and the measured value is transferred automatically. With a rigid probing element the measured value must be transferred by pressing a key. You can use the comprehensive input menu to define numerous parameters.

# IK 5000 QUADRA-CHEK

– the universal PC package solution for measuring machines

IK 5000 QUADRA-CHEK, the universal PC package solution for 2-D and 3-D measuring tasks, is equally suitable as initial equipment on a machine as well as for retrofitting. It is available in versions for three or four axes, and the optional expansions make it ready for all coordinate measuring technology applications and for video measuring microscopes. You can use it to measure two- and three-dimensional geometries and their relationships.

## Description

The IK 5000 QUADRA-CHEK consists of the IK 5000 slot card for the PC as well as the additional necessary slot covers and the corresponding PC software. Once installed on your PC you will have a powerful measuring station.

## System requirements

The following is necessary for running QUADRA-CHEK (data for 3-D profiling option in italics):

- PC:  $\geq$  dual-core Pentium, 2.66 GHz (*quad-core Pentium, 2.8 GHz*)
- Windows XP, Vista, 7 (32 bit) operating system
- RAM:  $\geq$  1GB (2GB)
- Hard disk: At least 500MB (1GB) available
- One PCI slot and one, two or three additional empty slots, depending on the version
- Screen:  
Resolution at least 1024 x 768 pixels;  
for the video function: 22" widescreen,  
resolution at least 1680 x 1050 pixels
- Windows user rights: Administrator

## Configuration

Various versions of the IK 5000 are available. Please see the configuration table for the model designations and various functions supported.

## User interface

The IK 5000 QUADRA-CHEK screen shows various configurable windows and tool fields for clear and simple operation.

The **Part View** window shows the measured features with the accepted measuring points. You can also define relationships here.

The **Video** window (only in the version with video evaluation) shows the video image in real time.

The **Template** windows list all measured features, relationships and constructed features together with their values and tolerances in tables.

The feature currently being measured is shown in the **Feature Stamp** window. The **Results** window contains all corresponding information.

The current measuring position is shown in the **DRO** window.

# IK 5000 QUADRA-CHEK

## – Functions

The innovative operator guidance provides self-explanatory information about the various functions. It already supports you while setting up the coordinate system (aligning the part and specifying the datum).

Various predefined features are available for measurement, depending on the version:  
*2-D measurement:* Point, line, circle, slot, rectangle

*3-D measurement:* Plane, cylinder, cone, sphere

The "Measure Magic" function makes measurement especially easy: it selects that feature which best matches the shape implied by the points probed.

With IK 5000 QUADRA-CHEK you can define features yourself (for example, a circle whose position and dimensions are exactly specified). In addition, you can establish relationships (distances, angles) between features.

Measuring programs that you create yourself or record automatically simplify the efforts necessary for repeated parts. The digital readout graphically takes you to the next measuring position during program run.

Depending on the version, IK 5000 QUADRA-CHEK probes the measuring points of plane (2-D) contours either automatically or manually via crosshairs, via optical edge detection, or via a video camera.

For 3-D contours, such as planes, cylinders, cones and spheres, the measuring points are probed with a touch probe. If a triggering touch probe is used the values are transferred automatically. With rigid probing elements a key must be pressed.

The measured features can be clearly displayed either in three dimensions or in one of the three projection planes.

### Multi-sensor scanning

Along with the usual method for measuring points, the IK 5494 and IK 5594 versions permit multi-sensor scanning: in addition to the video camera, the measuring machine is also equipped with a touch probe. You can then use the touch probe to measure 3-D features on the object, and enjoy the advantages of video evaluation for 2-D features. The integrated probe library manages the various measurement tools for you, whether they be optical, video, laser or touch-probe systems.

### Constructed features

QUADRA-CHEK gives you several possibilities for determining dimensions:

- Measuring the features
- Calculating the features (e.g. the enter point of a measured circle)
- Establishing a relationship between features (e.g. distance between two circle center points, angle between two lines)

However, you can also construct new features from existing features and from relationships. The properties of these constructed features can then be seen directly in the parts view.

### Data management

The integrated data-report generator for customized forms, databases and tolerance checks is used to archive, export and import data in numerous formats. Use the integrated spreadsheets for complex and non-standard calculations. Simply send your customized reports to a printer, or make the data available to other users in a database.

### Functional Part View window

QUADRA-CHEK provides you with a comprehensive, graphical Part View window. You can choose between a 3-D view, or a projection in the XY, YZ or ZX planes. Additionally, you can magnify, reduce, zoom, shift or rotate the views. You can define tolerances and constructed features in any view. The "pass/fail" color coding makes it easy to determine whether the part matches the specifications.

### Programming of parts

Difficult and repetitive measuring tasks can be simplified with the aid of a program that you either create yourself or record automatically during measurement of the first part. QUADRA-CHEK learns the reference points, the sequence of measurements, tolerances and data-output commands. QUADRA-CHEK visually leads you to the features to be probed when the program is run. The program view also provides you with an optimum overview of the process.

### Excerpt from the possibilities for the construction of features:

#### 2-D possibilities

### Integrated image processing

The integrated image processing function included with the video-function versions provides a special benefit: the video image is shown on the screen in real time and can be saved. QUADRA-CHEK can even assume complete control of the illumination and the motor zoom. A digital USB camera can be connected.

In order to quickly and directly compare the actual status and nominal status, import the parts drawing in DXF or IGES format, and place it over the video image.

### Axis positioning

The CNC versions of IK 5000 QUADRA-CHEK work as full-fledged controls, directly controlling the positioning of the X, Y, Z and Q axes. Servo motors or stepper motors can be connected. The necessary servo amplifiers for two or three axes are available as accessories.

### Automating

Programs running in combination with the CNC function of IK 5000 QUADRA-CHEK run automatically. This minimizes the effects of subjective assessments, and increases data throughput noticeably. By automating series of measurements and complex procedures, you spare yourself the strain of performing repetitive measuring tasks.

### 3-D profiling

The 3-D profiling option simplifies the measurement and evaluation of 3-D contours on multi-sensor and tactile measuring machines: First you import the CAD model, then you measure the real part, and finally you use the 3-D profiling function to compare the measured points with the CAD model. The measurement results are displayed graphically and can be managed in the usual manner. They can also be transferred to other quality systems.

#### 3-D possibilities

# ND 1200T TOOL-CHEK

## – the digital readout for tool presetters

The TOOL-CHEK ND 1200T digital readout is designed specifically for tool presetters. It supports the X and Z axes.

### Description

The ND 1200T has a monochrome flat-panel display. The robust, die-cast aluminum enclosure meets the demands of production floors.

### Functions

The self-explanatory user guidance of the TOOL-CHEK ND 1200T digital readout provides you with optimum support for all functions.

You can define up to 99 tool adapters for the tool holder. You can select either an absolute reference point, or one that refers to a master adapter. You can define the axis assignment and counting direction separately for each adapter.

Tool measurement usually consists of measuring the length and diameter or radius of a tool. You can also measure radii (e.g. for ball-nose cutters) and angles (e.g. for indexable inserts or lathe tools). The ND 1200T stores up to 300 tools. You can respectively show and print each actual value, nominal value and deviation.

You can group various tools, e.g. those that are necessary for machining a certain part. Create this setup plan either by selecting the tools from the tool list, or by measuring each tool.

For tools that are too large to be shown on the projector, such as teeth with a radius, you can freeze an axis for measurement. If a tool has more than one tooth, then you use the incremental function to ascertain the tool data in reference to the master tooth as well.

### Data interfaces

You use the data interfaces to transmit the tool data and to import and export settings, compensation values and saved tools. The RS-232-C/V.24 serial interface enables communication with a PC. You can connect printers or memory media to the USB port.

### Measuring radii and angles

You probe several points with the crosshairs in order to measure the radius. The digital readout calculates the radius and any form error from this. In order to measure a cutting edge angle, probe the two sides of the angle at two points each. The results are the intersection of the two lines as well as the inside angle "A".

T	L_00	mm
⊖	X	4.769
⊖	Z	0.111
	r	0.145
	F	0.000
Actual	Center	C Max

### Label printing

You can connect various label printers via the USB port. The control commands necessary for this are already set, and can be called via the menu function.

<sup>1)</sup> Depends on the signal period of the connected encoder as well as the subdivision factor

# ND 2100G GAGE-CHEK

– the digital readouts for multipoint inspection apparatuses

The ND 2100G GAGE-CHEK readouts are versatile metrology displays for measuring and inspection tasks in manufacturing and quality assurance. With inputs for up to eight encoders, they are predestined for multipoint measurements from simple pass/fail detection up to complex SPC evaluation.

## Description

The ND 2100G readouts have a robust, die-cast aluminum enclosure, and a keyboard suited to their environment. A large, graphic, color screen displays the measured values, the soft-key row and other information.

## Functions

The inputs can be assigned and combined as desired with mathematical, trigonometric or statistical formulas. This makes it possible to measure even complex dimensions such as thickness, flatness, volume and more. The results are displayed numerically or graphically as a color bar graph or a dial, or archived for statistical process control (SPC). The GAGE-CHEK can be configured for basic or advanced applications. Soft keys and hot keys can be adapted as required. The minimum/maximum function of the ND 2100G readouts monitors and stores the highest and lowest measured or calculated value. Warning and tolerance limits can be assigned to each display value. Results outside of the tolerance are marked with a different color. An acoustic alarm sounds simultaneously. Tolerance values, SPC parameters and custom formulas are stored for individual parts. GAGE-CHEK can manage up to 100 parts, each with up to 16 visible measurement features and 16 hidden measurement features. The rapid acquisition of measurement data makes monitoring dynamic events, such as the eccentricity of a rotating shaft, possible.

## Data interfaces

The GAGE-CHEK features various interfaces for communicating with parent systems:

- RS-232-C/V.24 for PC, also for remote operation of the GAGE-CHEK
- USB

## Position display

The display values appear in large, easy-to-read numbers. Values outside the tolerance are color-coded, immediately notifying you of errors.

## Bar diagram

You can select to have the values shown as a color-enhanced vertical or horizontal bar graph. The defined warning limits and tolerance limits provide instant feedback. If these limits are exceeded, the color of a bar changes from green to yellow or red, informing you explicitly of critical dimensions.

## SPC and data storage

GAGE-CHEK includes integrated SPC studies such as mean value charts (X bar) and range charts (R). Min, max, sigma, cp and cpk are also calculated, and are clearly displayed as a graph or histogram. Historical raw data can be saved in a tabular numeric display. Each dimension and all data are time and date stamped.

## Formulas and combinations

You can use mathematical and trigonometric formulas, as well as logical conditions, to combine individual measured values or measurement sequences with each other, and so create complex calculations. This can be used, for example, to calculate and display the circumference of a turned part, the volume of a cube, or the angle between two cams, and also to assign tolerance limits to these values.

# ND 200

## – the digital readouts for for measuring and testing stations

The ND 200 series offers digital readouts for one axis. Due to their performance range they are predestined for measuring and inspection stations, but are also intended for simple positioning tasks. The universal encoder input permits connection of all incremental encoders with 11  $\mu$ APP and 1 VPP and absolute encoders with the EnDat 2.2 interface from HEIDENHAIN.

### Description

The ND 200 series features a sturdy aluminum die-cast housing. A graphic TFT monitor displays the measured values, the status and the soft-key row. The splash-proof full-travel keyboard is built for the workshop.

### Functions

The standard **ND 280** readout provides the basic functions for simple measuring tasks. The **ND 287** features numerous functions for measuring and processing individual positions, for example sorting and tolerance check mode, minimum/maximum value storage, measurement series storage. These data make it possible to calculate mean values and standard deviations and display them in histograms or control charts. With its modular design, the ND 287 permits connection of a second encoder for sum/difference measurement or of an analog sensor, for example for temperature compensation.

### Data interfaces

The ND 28x have serial interfaces for measured value transfer to a PC or printer, for input/output of parameters and compensation value lists, and for diagnostics:

- USB
- RS-232-C/V.24
- Ethernet 100BaseT (option, only with ND 287)

The measured value transfer can be started at the ND keyboard, through an external command, through the RS-232-C/V.24 software command CTRL B, or by an adjustable internal clock.

### Accessories:

#### Encoder module

Input assembly for second encoder with 1 VPP, 11  $\mu$ APP or EnDat 2.2. interface  
ID 654017-01

#### Analog module

Input assembly for  $\pm 10$  V analog sensor  
ID 654018-01

#### Ethernet module

ID 654019-01

### Sorting and tolerance checking

With the sorting function of the ND 287, workpieces can be inspected for dimensional accuracy and divided into classes. The result is indicated in the status display in color or with symbols; in addition, a corresponding signal is available at the switching outputs.

Sorting and tolerance checking

### Display freeze

To be able to read the display reliably in spite of quickly changing values you can send an external signal to hold the display. The true position value is counted internally.

### Combination with a second encoder

A second encoder or a sensor on the ND 287 can be connected through an optional **encoder module** or **analog module** input assembly. The data from two encoders can be combined through mathematical operands. The result and the two measured values are saved. This permits further areas of application, such as the sum/difference display of two encoders or temperature compensation through a temperature sensor.

Sum measurement

### Recording and evaluating series of measurements

The ND 287 provides a measured-value memory for recording series of measurements. The measurement value, minimum, maximum or difference can be displayed during the serial measurements. In addition, the displayed value can be checked with the classification function for compliance to tolerances. The saved measured values are evaluated and represented as:

- Statistical view (mean value,  $x$  standard deviation  $s$ , range  $r$ )
- Diagram (graphical display of the measured values with minimum/maximum and mean values as well as tolerance limits)
- Measured value overview as a table

Measured value acquisition

### Statistical process control (SPC)

For SPC, the ND 287 saves up to 1000 measured values in a nonvolatile FIFO memory. They are evaluated with the following functions:

- Statistical view of measured values in the FIFO memory
- Measured value overview as a table
- Diagram of the last 30 measured values
- Histogram in ten classes with probability density function and process capability indexes  $c_p$  and  $c_{pk}$ .
- Control charts for mean value,  $x$  standard deviation  $s$ , and range  $r$

# Mounting

## Mounting the ND 100/ND 200

### ND100 series

You can set up the ND 12x either on a mounting arm on the machine, with the aid of a mounting adapter, or install it in a control panel. The parts required for fastening the display are included in delivery. They enable you to rotate and tilt the display. The mounting arm, tilting base, and mounting frame are available as accessories:

### Tilting base

ID 625491-01

### Mounting frame

ID 647702-01

For mounting the ND 12x in a housing or operating panel.

### Accessories:

### Mounting arm, straight

ID 382893-01

You can use the mounting arm to easily place the display at a conveniently operable position. It can be attached to the machine and swiveled by either a bracket or a hex bolt. The display is attached to the mounting arm via its own tilt/swivel mount.

### ND 200 series

The ND 200 digital readouts were conceived as bench-top units. They can easily be stacked. Recesses on the top prevent the stacked units from moving out of place.

You can secure the ND 28x from below by using M4 screws on a base plate.

Two ND 28x readouts fit next to each other in a 19" housing. A mounting base is available as an accessory for mounting in a 19" housing.

### Accessories:

### Mounting adapter for 19" housing

ID 654020-01

# Mounting and protection of ND 1000/ND 2000

## Mounting

The ND 1000 and ND 2000 are shipped with either a tilting base or a mounting base.

## Tilting base

The readout can be used as a tabletop unit when placed on the tilting base. The readout can then be tilted forward or backward by up to 20° for the best reading angle. The tilting base can be attached with M5 screws.

ID 382892-02

## Mounting adapter

The mounting base is used to attach the ND 1000 or ND 2000 to a mounting arm or directly to the machine. It also permits tilting of the readout.

ID 682419-01

Mounting adapter

## Protective cover (accessory)

Protective covers are accessories for protecting the keyboard and screen of the ND 1000/ND 2000 from becoming soiled. The display can still be easily read through the transparent protective covers. They fit themselves optimally to the front of the unit, without impairing the ease of operation.

# Accessories

## Calibration and demonstration parts

HEIDENHAIN offers various calibration parts as accessories in order to calibrate the optical and tactile edge detection methods.

### Calibration standard

For the calibration of video measuring machines, measuring microscopes and profile projectors. It can be traced back to national or international standards.

ID 681047-01

### 2-D demo part

The 2-D demo part is included with the ND 1200, ND 1300 and IK 5000. The application examples in the User's Manuals are based on this part. It can be reordered if a replacement is necessary.

ID 681047-02

### 3-D demo part (accessory)

Demo part for touch-probe applications. Examples in the ND 1400 and IK 5000 User's Manuals are based on this part.

ID 681048-01

### 3-D demo part for multi-sensor scanning (accessory)

Demo part specifically for applications that combine touch-probe systems and video edge detection. It is used for the examples in the IK 5000 User's Manual.

ID 681048-02

# External control elements

The digital readouts and the PC package can be operated easily and intuitively. However, remote operability may also be useful and convenient in some situations. The following components are available for remote operation:

**Foot switch** (accessory)  
With two freely assignable keys  
Cable length: 2.4 m

For ND with RJ 45 connector  
ID 681041-01

For IK 5000 with 3-pin DIN connector  
ID 681041-02

Foot switch

**Remote keypad** (accessory)  
For remote operation of the digital read-outs; features a numeric keypad and "enter" and "finish" keys; cable length: 4.5 m; with RJ 45 connector.

ID 681043-01

Remote keypad

**Joystick** (accessory)  
For remote operation and sensitive traversing of axes for ND 1300 and IK 5000. With 15-pin D-sub connector.

Without trackball	ID 681044-02
With trackball	ID 681044-01
With trackball and Z-focus fine adjustment	ID 681044-05

Joystick without trackball

Joystick with trackball and Z-focus fine adjustment

# Accessories

## Optical edge detector

Two fiber-optic cables are necessary for edge detection with the optical edge detector. One fiber-optic cable is attached to the projection screen with a transparent holder. The second cable is attached near the transmitted light source so that the fibers point toward the light source. The following accessory components are required.

### Fiber-optic cable (accessory)

With one right-angle end and an SMA connector (subminiature A) for ND or IK.

Bend radius:  $\geq 25$  mm

Temperature:  $\leq 100$  °C

Lengths 2 m, 3 m, 5 m

ID 681049-xx

### Holder (accessory)

With a hole for accepting the right-angle end of fiber-optic cables. Transparent design so that it can be attached to the projection screen.

Lengths: 350 mm, 600 mm, 760 mm

ID 681050-xx

### Fiber-optic cable connector (accessory)

Two SMA connectors (subminiature A) for connecting an integrated edge detector.

Bend radius:  $\geq 25$  mm

Temperature:  $\leq 100$  °C

Lengths 2 m, 3 m, 5 m

ID 681049-xx

# Servo amplifiers

## Servo amplifiers for CNC

For the versions with CNC axis positioning, HEIDENHAIN supplies the appropriate servo amplifiers both for stepper motors and for servo motors. The connecting cables are available upon request.

### Servo amplifier for CNC stepper motor (accessory)

For two-phase stepper motors  
Rated voltage: 48 V DC

*For 2 axes:*

Current per axis:  $\leq 2.5$  A  
Power per axis:  $\leq 120$  W

Line voltage: 240 V AC: ID 681045-01  
Line voltage: 120 V AC: ID 681045-03

*For 3 axes:*

Current per axis:  $\leq 1.67$  A  
Power per axis:  $\leq 80$  W

Line voltage: 240 V AC: ID 681045-02  
Line voltage: 120 V AC: ID 681045-04

### Servo amplifier for CNC servo motor (accessory)

For servo motors with brushes  
Line voltage: 240 V AC  
Rated voltage: 48 V DC

*For 2 axes:*

Continuous current per axis:  $\leq 3$  A  
Rated power per axis:  $\leq 150$  W

Line voltage: 240 V AC: ID 681046-01  
Line voltage: 120 V AC: ID 681046-05

*For 3 axes:*

Continuous current per axis:  $\leq 2$  A  
Rated power per axis:  $\leq 100$  W

Line voltage: 240 V AC: ID 681046-02  
Line voltage: 120 V AC: ID 681046-06

## Servo amplifier for zooming

A separate servo amplifier is necessary for the zoom function of the ND 1300. It can also be used for the IK 5000 if the performance of the integrated amplifier does not suffice (0.4 W).

### Servo amplifier for zooming with stepper motor

(accessory)

For two-phase stepper motors in open-loop systems (e.g. for Navitar zoom)

Line voltage: 100 V to 240 V AC  
Rated voltage: 12 V DC  
Current:  $\leq 2$  A  
Power:  $\leq 160$  W

With EU power cable: ID 722334-02  
With U.S. power cable: ID 722334-01

Servo amplifier for CNC stepper motor

Servo amplifier for CNC servo motor

Servo amplifier for zooming with stepper motor

# Interfaces

## Switching inputs/outputs on ND 287

### Switching inputs

The ND 287 digital readout features many inputs for external operation and outputs for switching functions. The input can respond by pulse or make contact.

**Exception:** The switching inputs for transmitting measured values over the data interface are separate for contact and pulse.

The switching input E is active when a Low signal  $U_L$  is applied (contact or pulse to 0V).

#### Signal levels

- $0.5V \leq U_L \leq 0.9V$  at  $I_L \leq 6\text{ mA}$
- $3.9V \leq U_H \leq 15.0V$
- $t_{\min} \geq 30\text{ ms}$

#### Zero reset/preset

Each axis can be set by an external signal to the display value zero or to a value stored in a parameter (SET).

#### External control of measurement series Switch display between MIN, MAX or DIFF

With a continuously applied Low signal at the corresponding switching input you activate the external control of measurement series. Starting a measurement series and switching to the MIN/MAX/DIFF display are controlled externally over additional switching inputs.

#### Ignoring reference mark signals

(disabling the reference pulse)  
When the input is active, the readout ignores all reference mark signals. A typical application is for linear measurement through the lead screw and a rotary encoder.

#### Activating or deactivating REF mode

After switch-on or a power interruption, the digital readout can be switched externally to REF mode. The next signal then deactivates REF mode (switchover function).

#### Display with axis coupling

As an option, the ND 287 can have two encoder inputs. Using switching inputs, you can switch the display to individual measured values, sum, difference or any logical operation.

ND 287	
<b>12 switching inputs</b>	Reset, clear error message Datum setting Externally control measurement series or display of $X1^{1)}$ Start measurement series or display of $f(X1, X2)^{1)}$ Display minimum MIN or display of $X2^{1)}$ Display maximum MAX or display of $X1 + X2^{1)}$ Display maximum DIFF or display of $X1 + X2^{1)}$ Measured value output (pulse) Measured value output (contact) Ignore reference mark signals (input X1) Ignore reference mark signals (input X2) Activating or deactivating REF mode
<b>6 switching outputs</b>	Display value is zero Measured value $\geq$ switching limit A1 Measured value $\leq$ switching limit A2 Measured value $>$ upper sorting limit Measured value $<$ lower sorting limit Errors

<sup>1)</sup> Also selectable by parameter

### Switching outputs

The ND 287 features open-collector outputs that switch to 0 V (= active Low).

### Delay of signal output:

$t_v \leq 20 \text{ ms}$

### Signal levels

$U_L \leq 0.4 \text{ V}$  at  $I_L \leq 100 \text{ mA}$

$U_H \leq 32 \text{ V}$  at  $I_H \leq 10 \mu\text{A}$

### Trigger points (in actual value mode)

When the measured value reaches trigger points defined by parameter, the corresponding output becomes active. Up to two trigger points can be defined.

### Switch-off ranges

(in distance-to-go mode)

In the distance-to-go mode the trigger points function as switch-off ranges. They are located symmetrically around the display value 0.

### Sorting limits

When the measured value exceeds the limits defined via parameters, the corresponding outputs become active.

### Trigger signal for error

The ND 200 series readouts constantly monitor the measuring signals, the input frequency, the data output, etc. for errors, and report errors as they occur with error messages. If an error occurs that may distort the measurement or corrupt the data, the readout activates a switching output. This feature allows monitoring of automated processes.

### Zero crossover

At the display value "zero," the corresponding output becomes active. The minimum signal duration is 180 ms.

# Software

## QUADRA-CHEK Wedge

### QUADRA-CHEK Wedge software

For communication between the ND 1000/ND 2000 and PC ID 709141-01

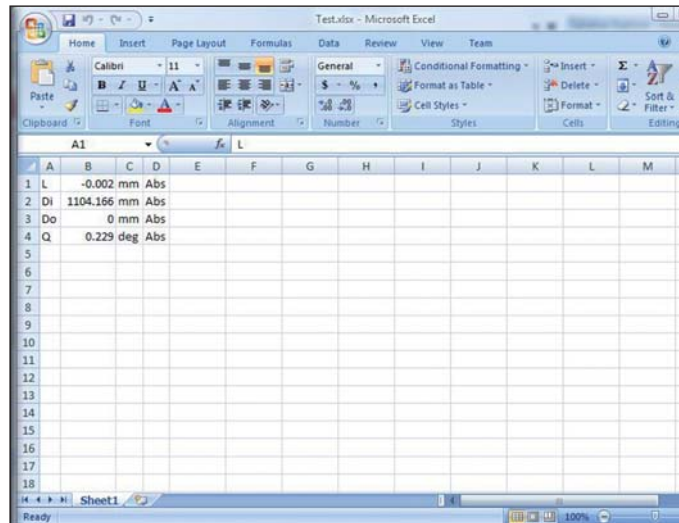

The QUADRA-CHEK Wedge software simplifies communication between an ND 1000/ND 2000 and a Windows-based PC. The measured values are transmitted from the digital readout to the PC via a RS-232-C connection, and are written directly to an Excel table, where the data can be edited, saved and printed. A suitable RS-232-C cable is included with QUADRA-CHEK Wedge (cable length: 3 m).

### System requirements

- Windows XP, Vista or 7 (32 bits)
- Internet Explorer 6.0 or higher
- Excel 2003 or later
- Windows user rights: Administrator

The values measured by the digital readout are transmitted to the PC...

...and can be saved in an Excel table.
